PROFESSIONAL SUMMARY

Results-driven Data Engineer with hands-on experience designing and deploying scalable ETL/ELT pipelines, real-time streaming architectures, and big data processing frameworks. Proven ability to automate complex multi-platform data workflows using Apache Spark, PySpark, Kafka, and PostgreSQL, achieving up to 95% reduction in manual data management overhead. Strong command of Python, SQL (DDL/DML, performance tuning), and cloud-based data solutions. Experienced in data warehousing principles, CI/CD pipelines, and containerised deployments — well-positioned to design robust data engineering solutions.

TECHNICAL SKILLS

Data Engineering: ETL/ELT Pipeline Development, Apache Spark, PySpark, Kafka, Apache Pulsar, Streaming Data Processing, Data Pipeline Automation, Batch & Real-Time Ingestion

Cloud & Infrastructure: AWS (S3, Glue, Lambda, Redshift, CloudWatch, Step Functions), Docker, MinIO, Linux/Ubuntu, CI/CD

Databases & Storage: PostgreSQL, Oracle, MySQL, MongoDB, SQL (DDL / DML / Performance Tuning), Columnar Storage

Programming: Python, PySpark, SQL, Shell Scripting, Java, R, JavaScript, ReactJS, HTML/CSS

Big Data & ML: Apache Spark, MLFlow, DVC, LangChain, AI Agents, Machine Learning, Deep Learning, NLP

Tools & DevOps: Git, Docker, Apache Kafka, Apache Pulsar, MLFlow, DVC, SFTP, Google Ads API

PROFESSIONAL EXPERIENCE

GlobalLogic | Software Engineer (Client: Google) — August 2025 – Present | Gurugram, India

- Spearheaded the frontend development of an **AI Contract Insights** module for an internal contract management platform, enabling Product Managers to perform complex contract data analysis within seconds.
- Built a responsive conversational UI handling asynchronous **LLM streaming responses**, real-time context management, and markdown rendering — surfacing AI-driven insights cleanly to end users.
- Implemented a **Contract Expiration Tracker** with color-coded status indicators and sortable data grids, enabling legal teams to proactively monitor and act on upcoming contract renewals.
- Engineered a high-performance advanced search and filter module using **Angular Reactive Forms**, supporting multi-criteria filtering across large contract datasets for fast, precise data retrieval.

Semusi Technologies | Machine Learning Intern — May 2024 – July 2024 | Remote

- Architected a universal ETL pipeline automating end-to-end data transfer workflows across **5+ heterogeneous platforms** (Oracle, PostgreSQL, SFTP, Google Ads, MinIO) using Apache Spark; eliminated **95% of manual data management overhead** and improved data processing efficiency by **40%**.
- Built real-time data streaming and ingestion workflows using **Apache Kafka** and Apache Pulsar, enabling continuous, low-latency data flow from multiple source systems into the processing layer.
- Engineered a **PySpark-based clustering pipeline** for lookalike audience modelling, processing large-scale marketing datasets and delivering a targeted prospect list projected to **improve lead conversion by 25%**.
- Worked across structured and semi-structured data formats (CSV, JSON, Parquet) and protocols (SFTP, REST APIs, messaging queues), ensuring reliable ingestion from diverse upstream systems.
- Tools: Apache Spark, PySpark, PostgreSQL, Kafka, Apache Pulsar, MinIO, Oracle, SFTP, Python.

IIT Bhilai | Research Intern — June 2023 – July 2023 | Remote

- Developed a modular GNN experimentation framework encompassing **10+ model architectures** and a repository of **20+ diverse graph datasets**, reducing experiment setup and pipeline configuration time by **90%**.
- Built reusable data processing pipelines for graph-structured datasets, standardising ingestion, transformation, and loading workflows for research reproducibility.

KEY PROJECTS

LangChain Multi-Tool Agents: Built and deployed **8+ full-stack Generative AI applications** using LangChain and the Gemini API. Engineered interactive UIs with Streamlit; containerised each application with Docker for scalable, reproducible deployment — demonstrating end-to-end pipeline design from data ingestion to inference serving.

SwiftBERT — Knowledge Distillation Framework (DS510): Implemented a knowledge distillation pipeline compressing BERT into a student model **86.89% smaller**, **94.87% faster**, and retaining **95% of original accuracy** — validating ETL-style data transformation principles applied to ML model pipelines.

HB Meter — Non-Invasive Anemia Screening (AIIMS Raipur Collaboration): Developed a Raspberry Pi 4 data acquisition and processing pipeline that ingests 30-second finger video recordings and predicts haemoglobin count with **97% accuracy** — providing a portable, low-cost diagnostic alternative for remote healthcare settings.

AI-Powered Interview Practice System (CS559): Built a multi-modal data processing system performing real-time video and audio analysis to evaluate verbal communication, body posture, and pronunciation; delivering structured, actionable feedback to improve employability outcomes.

EDUCATION

Indian Institute of Technology, Bhilai — B.Tech, Data Science & Artificial Intelligence May 2025 | GPA: 8.87 / 10

Relevant Coursework: DBMS & Big Data, Cloud Computing, Data Visualization, Machine Learning, Artificial Intelligence, Natural Language Processing, Statistical Programming, Computer Networks, Operating Systems, Information Security, Computer System Design
