PROFESSIONAL SUMMARY

Software Engineer with a strong foundation in full-stack development, distributed systems, and backend engineering. Hands-on experience building responsive frontend applications with Angular and TypeScript, designing real-time data streaming pipelines with Apache Kafka, and developing Python and Java-based solutions. Adept at working across the stack — from RESTful API design and microservices to CI/CD pipelines and containerised deployments with Docker. Quick learner with a strong grasp of object-oriented design, data structures, and problem-solving, backed by an IIT Bhilai degree in Data Science & AI.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, R, HTML, CSS
Frontend: Angular, Angular Reactive Forms, ReactJS, TypeScript, JavaScript, HTML/CSS
Backend & APIs: Spring Boot, FastAPI, RESTful API Design, Microservices Architecture, OOP, Design Patterns
Messaging & Streaming: Apache Kafka (producers, consumers, topics, partitions), Apache Pulsar, Distributed Systems
Databases: PostgreSQL, Oracle, MySQL, MongoDB (CRUD, indexing, aggregation), MS SQL, SQL Performance Tuning
DevOps & Tools: Git, Docker, CI/CD Pipelines, Linux/Ubuntu, SonarQube, Agile/Scrum, JUnit
AI & Data: LangChain, AI Agents, Apache Spark, PySpark, MLFlow, Machine Learning, NLP, Deep Learning

PROFESSIONAL EXPERIENCE

GlobalLogic | Software Engineer (Client: Google) — August 2025 – Present | Gurugram, India

- Spearheaded the frontend development of an **AI Contract Insights** module for an internal contract management platform using Angular and TypeScript, enabling Product Managers to perform complex contract data analysis within seconds.
- Built a responsive conversational UI handling asynchronous **LLM streaming responses**, real-time context management, and markdown rendering — surfacing AI-driven insights cleanly to end users.
- Implemented a **Contract Expiration Tracker** with color-coded status indicators and sortable data grids, enabling legal teams to proactively monitor and act on upcoming contract renewals.
- Engineered a high-performance advanced search and filter module using **Angular Reactive Forms**, supporting multi-criteria filtering across large contract datasets for fast, precise data retrieval.
- Followed Agile development practices, contributing to sprint planning, code reviews, and adhering to coding standards for maintainable, production-grade software.

Semusi Technologies | Machine Learning Intern — May 2024 – July 2024 | Remote

- Architected a backend data pipeline automating end-to-end workflows across **5+ heterogeneous platforms** (Oracle, PostgreSQL, SFTP, Google Ads, MinIO) using Python and Apache Spark; eliminated **95% of manual overhead** and improved processing efficiency by **40%**.
- Built real-time messaging and event-driven workflows using **Apache Kafka** (producers, consumers, topics) and Apache Pulsar, enabling low-latency data flow across distributed systems.
- Designed and executed queries across relational databases (PostgreSQL, Oracle) and worked with structured and semi-structured formats (CSV, JSON, Parquet) via REST APIs and messaging queues.
- Engineered a **PySpark-based clustering pipeline** for lookalike audience modelling, delivering a targeted prospect list projected to **improve lead conversion by 25%** for bank loan campaigns.
- Tools: Python, Apache Spark, PostgreSQL, Kafka, Apache Pulsar, MinIO, Oracle, SFTP.

IIT Bhilai | Research Intern — June 2023 – July 2023 | Remote

- Developed a modular GNN experimentation framework with **10+ model architectures** and **20+ graph datasets**, reducing experiment setup time by **90%** — demonstrating strong software design and code reusability principles.
- Built reusable data processing and transformation pipelines for graph-structured datasets, applying object-oriented design patterns for clean, maintainable research code.

KEY PROJECTS

LangChain Multi-Tool Agents: Built and deployed **8+ full-stack Generative AI applications** using LangChain and the Gemini API with Python backend services and Streamlit UIs; containerised each application with Docker for reproducible, scalable deployment — demonstrating end-to-end full-stack development skills.

AI-Powered Interview Practice System (CS559): Designed and implemented a multi-modal backend system performing real-time video and audio analysis using Python, applying REST API principles and modular software architecture to deliver structured feedback on verbal communication, posture, and pronunciation.

SwiftBERT — Knowledge Distillation Framework (DS510): Implemented a Python-based model compression pipeline reducing BERT to a student model **86.89% smaller** and **94.87% faster** while retaining **95% accuracy** — showcasing strong algorithmic problem-solving and performance optimisation skills.

HB Meter — Non-Invasive Anemia Screening (AIIMS Raipur Collaboration): Developed an end-to-end Python data acquisition and processing system on Raspberry Pi 4 that predicts haemoglobin count with **97% accuracy** from video input — demonstrating applied software engineering in a real-world healthcare setting.

EDUCATION

Indian Institute of Technology, Bhilai — B.Tech, Data Science & Artificial Intelligence May 2025 | GPA: 8.87 / 10

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Cloud Computing, Computer Networks, Operating Systems, Software Tools & Technologies, Machine Learning, NLP, Information Security, Computer System Design, Statistical Programming
